

## AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

### Listing of Claims:

1           1-37   (Canceled)

1           38.   (Currently amended) A computer implemented client method for  
2 dynamically managing a user software license, the method comprising:  
3           receiving an action from the user to access a feature from one or more features of  
4           a software program;  
5           responsive to receiving the action from the user, sending a request to a server  
6           computer for an authorization to access the feature of the software  
7           program, the request including license verification information concerning  
8           the user, thereby allowing the server computer to determine whether  
9           current software license information concerning the user needs to be  
10           updated and, based on the determination, to store an update to the current  
11           software license information;  
12           receiving current software license information concerning the user from the server  
13           computer; and  
14           storing received current software license information concerning the user.

1           39.   (Previously presented) The method of claim 38 wherein the received  
2 current software license information concerning the user indicates that the user is not  
3 licensed to run the software program, the method further comprising performing at least  
4 one step from a group of steps comprising:

5 displaying a message to the user indicating that the user is not licensed to  
6 run the software program;  
7 providing the user with an opportunity to purchase a license to run the  
8 software program;  
9 allowing the user to run the software program without a license for a  
10 limited time only;  
11 allowing the user to run the software program without a license a limited  
12 number of times only; and  
13 terminating the software program, such that the user cannot run the  
14 software program.

1 40. (Previously presented) The client method of claim 38 wherein:  
2 the received current software license information concerning the user  
3 comprises modified license information concerning the user.

1 41. (Previously presented) The client method of claim 40 wherein the  
2 modified license information concerning the user comprises a user software license from  
3 a group of user software licenses comprising:  
4 an activated user software license;  
5 a deactivated user software license;  
6 an extended user software license;  
7 a restricted user software license;  
8 an upgraded user software license; and  
9 a downgraded user software license.

1 42. (Previously presented) The client method of claim 38 wherein receiving  
2 current software license information concerning the user includes a hardware  
3 configuration identifier of a computer associated with the user, the method further  
4 comprising:  
5 creating a current hardware configuration identifier of the computer  
6 associated with the user; and

7 comparing the received hardware configuration identifier to the current  
8 hardware configuration identifier.

1 43. (Previously presented) The client method of claim 42 further comprising:  
2 responsive to a difference between the received hardware configuration  
3 identifier and the current hardware configuration identifier being  
4 below a predetermined threshold, allowing the user to run the  
5 software program.

1 44. (Previously presented) The client method of claim 42 further comprising:  
2 responsive to a difference between the received hardware configuration  
3 identifier and the current hardware configuration identifier not  
4 being below a predetermined threshold, terminating the software  
5 program, such that the user cannot run the software program.

1 45. (Previously presented) The client method of claim 42 further comprising:  
2 responsive to a difference between the received hardware configuration  
3 identifier and the current hardware configuration identifier not  
4 being below a predetermined threshold, performing at least one  
5 step from a group of steps comprising:  
6 displaying a message to the user indicating that the user is not  
7 licensed to run the software program;  
8 providing the user with an opportunity to purchase a license to run  
9 the software program;  
10 allowing the user to run the software program without a license for  
11 a limited time only; and  
12 allowing the user to run the software program without a license a  
13 limited number of times only.

1           46. (Currently amended) A computer readable medium containing instructions  
2 that, when executed, cause the computer system to perform desired actions for  
3 dynamically managing a user software license, wherein the instructions comprise:  
4           program code for receiving an action from the user to access a feature from one or  
5           more features of a software program;  
6           program code for, responsive to receiving the action from the user, sending a  
7           request to a server computer for an authorization to access the feature of  
8           the software program, the request including license verification  
9           information concerning the user, thereby allowing the server computer to  
10           determine whether current software license information concerning the  
11           user needs to be updated and, based on the determination, to store an  
12           update to the current software license information;  
13           program code for receiving current software license information concerning the  
14           user from the server computer; and  
15           program code for storing received current software license information  
16           concerning the user.

1           47. (Currently amended) A computer system for dynamically managing a  
2 user software license, the computer system comprising:  
3           a mechanism for receiving an action from the user to access a feature from one  
4           or more features of a software program;  
5           a mechanism for, responsive to receiving the action from the user, sending a  
6           request to a server computer for an authorization to access the feature of  
7           the software program, the request including license verification  
8           information concerning the user, thereby allowing the server computer  
9           to determine whether current software license information concerning  
10           the user needs to be updated and, based on the determination, to store an  
11           update to the current software license information;

12 a mechanism for receiving current software license information concerning the  
13 user from the server computer; and  
14 a mechanism for storing received current software license information  
15 concerning the user.
